PROBLEM

- Public Health Departments face a critical issue in tracking the spread of COVID-19 due to the fast expansion of infection clusters.
- There's a pressing need for tools to help decipher and manage the complex data related to COVID-19 cluster infections.
- Identifying unseen transmission links in infection chains is a key problem in this context, essential for thorough contact tracing efforts.

RESULT

- Successful creation of a visual analytics dashboard that aids public health officials in tracking and understanding COVID-19 infection clusters.
- Development of a novel method to identify and suggest unrecorded transmission links between these clusters.

USP

- The paper highlights cutting-edge visual analytics methods that greatly enhance the reach and efficiency of contact tracing operations, applicable across various public health scenarios beyond just COVID-19 tracking.
- The dashboard received positive feedback from several Public Health Departments, affirming its effectiveness in analyzing pandemic trends and aiding response efforts.
