new/s/leak – Information Extraction and Visualization for Investigative Data Journalists

In: Association for Computational Linguistics (ACL): The 54th Annual Meeting of the Association for Computational Linguistics : Proceedings of System Demonstrations. The Association for Computational Linguistics, 2016, pp. 163-168

Contribution

This excellent work addresses the problem of discovering and analyzing newsworthy stories from large textual datasets.

It stands out from other work in that it combines state-of-the-art natural language processing tools with a web-based network visualization for navigation, annotation and editing of extracted information. As a result it enables journalists to efficiently browse, filter and search large collections of text documents using a trend-setting tool.
